TIS indicates these doctors have a prescribed connection to your DB but the GMC does not.

Example of current header

The top left TRAINEE DOCTORS link will be replaced with the Back to TIS link in navigation. The current TRAINEE DOTCTORS functionality is repeated with in the UI several times, so this is essentially of no value and will be easily replaced with the Back to TIS link.

Example of link between Reval (Concerns) system and TIS in header area

At this MVP stage we will keep the 2 systems seperate. I have added a link in the primary navigation area, the system has multiple navigation areas and tabs. It is imprtant that the user can naviagte to TIS Admin fro any area of this system.
