Notes

Trust admin users need to be assifgned to a Trust in TIS. At this stage we will be adding a L1 'User' area, where they are able to manage users. This is where we will sit 'Trust Admins' so that the user can find a Trust, and then assign or remove a 'Admin user' to that Trust.

The following is an example of how the UI should break data areas and help the user to digest information regarding all areas. This example is a record that has been populated and ready to save.
