TRAINEE INFORMATION SYSTEM

Trainee view - Optimised for mobile

Iteration 1

First iteration of the Trainee Portal - a responsive site optimised for Mobile. This iteration covered the creation of:

A cleaner responsive login page in keeping with new iterated form design, optimised for mobile.

A header and menu format that had consistent branding and optimised real estate with sticky menu

A responsive menu from mobile to desktop.

A new order of menu to optimise trainee usage.

A hard working landing page based on trainee usage and available data for MVP (scrapping idea of a summary/welcome page)

A design for ‘Placements’ - giving the user the information they need most with the least cognitive load. While keeping all info on one page to dev effort down.

A responsive template, taking data from user friendly tile list view on mobile to grid view on desktop.

First look at design of tables/grids - non sortable and sortable

Refined colour coding from Intrepid, keeping concept users will be familiar with but improved logic of colouring.

Created data overspill template for mobile if needed.
